

SAMPLE EXPORT

ILLUSTRATIVE PROTOTYPE OUTPUT

Sample Evidence Pack

A prototype-style sample export showing how Corentis could package workflow controls, review history, and evidence for later scrutiny.

PACK SUMMARY

This sample is deliberately labeled as illustrative. It is intended to show the kind of structured export Corentis is being built to produce, not to imply live customer deployment, production metrics, or finished enterprise maturity.

Workflow console summary

WORKFLOW

SAMPLE

Complaints triage oversight export

Illustrative review pack for an AI-assisted complaints workflow in a regulated operational environment.

OWNER

ILLUSTRATIVE

Customer operations and conduct oversight

The workflow owner is shown as a named operational function with escalation support from risk and review stakeholders.

PACK STATUS

Ready for governance review

Pack assembled after pre-deployment testing, review-gate activity, and runtime monitoring.

EXPORT FORMAT

PDF and JSON

The pack is framed as a reviewable PDF with supporting structured export metadata.

RECORD WINDOW

14-day review window

Illustrative monitoring and approval period covering one bounded workflow phase.

Workflow summary and operating context

Workflow summary

This page is designed to show how a serious export could open with context rather than raw event data.

Field	Value
Use case	AI-assisted complaints triage in a regulated service workflow
Primary owner	Customer operations
Oversight functions	Conduct review, risk, complaints governance
Decision posture	Human approval required for escalated cases
Pack purpose	Illustrative sample export for governance and assurance review

INTERPRETATION NOTE

The structure is intended to be review-ready at first glance.

A governance or compliance reader should be able to see the workflow purpose, responsible function, oversight posture, and pack status without reconstructing context from later pages.

Control mapping and rule references

Mapped controls

Illustrative mapping for one workflow record.

Control area	Applied rule	Why it matters
Escalation	Cases with vulnerable-customer indicators must be escalated to a senior, visible human review before progression.	Sensitive cases need visible human review before progression.
Explanation	Recommendation must include an explanation for the decision, supported by evidence, and internal governance.	Explanation for the decision, supported by evidence, and internal governance.
Override logging	Manual override must capture reviewer, timestamp, and rationale.	Maintain institutional memory and later evidence reuse.
Export readiness	Workflow record must retain control references and evidence.	Support investigations, audit-facing review, and assurance reuse.

Approval history and exception timeline

Approval history	Event	Owner	Result
Timestamp			
2026-04-10 09:12	Workflow testing signed off	Workflow owner	Approved
2026-04-11 11:48	High-sensitivity case reviewed	Named reviewer	Override recorded
2026-04-12 14:27	Escalation threshold crossed	Conduct review	Escalated
2026-04-12 16:03	Final release for monitored use	Workflow owner	Approved

Exception history	Recorded handling
Exception type	
Explanation field missing	Workflow paused until reviewer supplied required rationale.
Vulnerable-customer indicator	Case routed automatically to the escalation path.
Manual override	Reason and approver retained in export metadata.

Test, runtime visibility, and metadata

Illustrative test coverage		
Scenario type	Coverage	Outcome
Prompt variants	12 checks	No blocking failures. Explanation field remained mandatory in final export.
Edge cases	8 checks	Escalation path triggered correctly for high-risk wording.
Fallback behaviour	6 checks	Workflow paused as designed when policy conditions failed.
Reviewer routing	4 checks	Named approval gate surfaced correctly in the workflow record.

MONITORING WINDOW

14-day sample period

Illustrative view of overrides, alerts, and review activity during a bounded monitoring period.

ALERTS SURFACED

2 policy alerts

Alerts are shown as sample event counts, not live operational metrics.

OVERRIDES

1 recorded override

Any manual change is retained with approver and rationale for later inspection.

Export metadata

Included to show the intended pack structure.

Field	Value
Pack status	Illustrative prototype output
Generated for	Governance and assurance review
Format	PDF with supporting JSON export path
Prepared by	Corentis sample export system
Export date	2026-04-20

CLOSING INVITATION

If this export shape is useful, the next step is a more specific evidence discussion.

Corentis would be glad to continue with a conversation about oversight requirements, export design, approval history, and the evidence standards a serious reviewer would want to inspect in practice.
